Career Objective

Experienced React Native developer with 5+ years in building scalable cross-platform mobile and web applications. Seeking a challenging role in a dynamic organization where I can contribute to technical leadership, architecture decisions, and mobile-first innovation.

Professional Experience

Bacancy Technology (Ahmedabad, Remote) – Senior React Native Developer

📍 Ahmedabad, India | 📅 Jan 2022 – Present - Developed and maintained multiple iOS and Android apps using React Native and TypeScript. - Integrated third-party services including Stripe, Firebase, Google APIs, and AdMob. - Collaborated in cross-functional Agile teams for requirement gathering and product releases. - Handled full lifecycle of apps from discovery to deployment and post-release updates. - Mentored junior developers and reviewed pull requests for quality assurance.

ISOL Systems – Mobile Application Developer

📍 Bikaner, India | 📅 Jan 2020 – Jan 2022 - Built feature-rich mobile apps with React Native and Flutter. - Used Firebase suite extensively for authentication, storage, real-time database, and push notifications. - Designed and implemented APIs with Node.js backend. - Involved in UI/UX development ensuring responsiveness across iOS and Android platforms.

Key Projects

Wealth Wise (iOS & Android)

Technologies Used: React Native, Firebase (Firestore, Authentication, Realtime Database), Social Logins, Local Storage

Project Description: An educational mobile app designed to teach users about stock markets, budgeting, and personal finance. The app features a quiz-based learning system with points, lives, and diamonds as part of gamification. Users progress through finance modules and earn diamonds upon completion. The app includes real-time leaderboard updates and social login options (Google, Facebook, Apple) for a seamless experience. Real-time data synchronization was managed using Firebase services.

Roles and Responsibilities: - Designed and developed quiz-based learning modules with reward-based logic. - Implemented social login integration and real-time data sync with Firebase. - Managed user progress, point system, and gamification flow using local and cloud storage. - Conducted regular testing and maintenance for performance optimization.

Sandlines (iOS & Android)

Technologies Used: React Native, TypeScript, Firebase Auth, Firestore, Firebase Storage, Firebase Push Notifications, Stripe, Google Places Autocomplete

Project Description: A showcase app for Sandlines designed to engage US voters and candidates. It allows users to view, share, and support legislative demands and bills. The platform supports donations with Stripe, graphical representation of voting trends, and interactive profiles for candidates, voters, organizations, and admins. Features include demand follow system, candidate tracking, dynamic content sharing, and Google location integration.

Roles and Responsibilities: - Developed UI components based on discovery documents. - Ensured device responsiveness and cross-platform consistency. - Integrated Stripe payments, push notifications, Google Places Autocomplete, and image pickers. - Provided maintenance, performance tuning, and feature updates.

RippleStreet (iOS & Android)

Technologies Used: React Native, TypeScript, Firebase, AWS Amplify, CodePush, Video Player

Project Description: A social engagement app allowing users to participate in product-based events by sharing photos, videos, comments, and reviews. The app supports real-time updates and user-generated content tied to specific campaigns. Integrated location tracking, media library access, and push notifications for real-time engagement. Also includes store locator, dynamic campaign content, and Amplify-backed notifications.

Roles and Responsibilities: - Delivered UI development across iOS/iPad devices. - Managed real-time media sharing, notification handling, and social features. - Integrated geolocation, video/photo functionality, and AWS Amplify backend services.

Noritz Procard (iOS & Android)

Technologies Used: React Native, React Navigation, Google Map, React Redux, Firebase Push Notifications, Native Modules, AsyncStorage

Project Description: A dedicated installer app that helps professionals register, set up, and track issues in newly installed heaters. The app streamlines heater warranty registration, error logging, and status checks through encrypted communication with APIs. Real-time sync, secure storage, and robust UI were designed to handle field operations efficiently.

Roles and Responsibilities: - Regularly performed bug fixing and performance tuning. - Built custom modules to handle encryption and secure data exchange. - Integrated local DB storage and automated error report logging. - Coordinated backend API integration for device commands.

Face App (iOS & Android)

Technologies Used: Flutter, Provider, Google ML Kit, Local DB

Project Description: A face detection and recognition app that leverages Google ML Kit to train and identify faces in real-time. Built using Flutter, it enables users to scan faces through a live camera feed and store facial data locally for later retrieval. The app showcases the capabilities of AI/ML integrated with mobile platforms.

Roles and Responsibilities: - Designed and implemented the end-to-end flow for face scanning and recognition. - Managed state and local DB storage for training data. - Built a smooth UI using Flutter and Provider state management.

Identify That (iOS & Android)

Technologies Used: React Native, React Redux, React Navigation, Native Modules, SQLite, Firebase, Google AdMob

Project Description: An app that helps users identify plant species using camera input and Wikipedia APIs. Includes a gamified experience using AdMob rewarded ads, showing detailed plant descriptions post-detection. The app stores history locally and allows users to revisit past identifications.

Roles and Responsibilities: - Implemented native modules for camera and image processing. - Integrated Wikipedia API for content enrichment. - Managed user history using SQLite. - Added monetization using AdMob and Firebase analytics.

NH Passport (iOS)

Technologies Used: Swift, SQLite, Video Player, Social Logins, Push Notifications

Project Description: Designed for NH trade show attendees, this app enabled users to track and complete event-specific tasks, earn rewards, and stay updated. Includes full-featured video playback, social login, real-time notifications, and data syncing across devices for seamless user experience.

Roles and Responsibilities: - Developed app layout and navigation based on UI discovery. - Integrated login via Google and Facebook. - Handled CRUD operations for task management. - Built reusable components for push messaging and video streaming.

Angelica Flowers (iOS & Android)

Technologies Used: React Native, WooCommerce API, Google Maps, React Redux, Firebase Push Notifications, Native Modules, AsyncStorage

Project Description: A flower delivery app allowing users to choose floral gifts, track orders, and manage deliveries. Integrated with WooCommerce for product management and payment tracking. Real-time order updates and location services were included to improve delivery flow and customer engagement.

Roles and Responsibilities: - Built reusable product and checkout components. - Integrated payment systems and mapped live order status. - Conducted API testing and bug fixes post-deployment.

Blue Pony Video Library (iOS)

Technologies Used: Swift, Video Player, Background Media Downloader

Project Description: A categorized video content app designed to share brand content, training, and promotional videos. Users could stream or download videos in the background and share them via email or social media. Designed to be responsive across iPads and iPhones.

Roles and Responsibilities: - Implemented background download logic for offline playback. - Built categorized video lists and sharing modules. - Ensured iPad UI optimization and playback compatibility.

Technical Skills

Languages/Frameworks: JavaScript, TypeScript, React Native, Flutter, Swift, Node.js, Express.js

Mobile Services: Firebase, AWS Amplify, Google Maps, AdMob, Stripe

State Management: Redux, Provider

Tools & IDEs: Xcode, Android Studio, VSCode, Git, JIRA

Databases: Firestore, SQLite, Realtime DB

Platforms: iOS, Android, macOS, Windows

Education

Master of Computer Science

Maharaja Ganga Singh University, Bikaner, Rajasthan

 2017 – 2019

Soft Skills

- Team Collaboration & Agile Practices
- Problem Solving & Debugging
- Communication & Mentorship
